Summary

AI Engineer with hands-on experience building AI-powered systems, LLM applications, RAG pipelines, and backend services. Strong background in Python, machine learning, information retrieval, and API-driven development, with experience designing and integrating AI solutions for real-world applications.

Work Experience

Dewly Da Nang, Vietnam
AI Engineer *05/2026 – 08/2026*

- Designed and built a standalone **RBAC** microservice (**FastAPI**) with fine-grained authorization APIs, including chunk-level permission filtering on **Qdrant** payloads for secure RAG retrieval across HR/Finance/Tech agents.
- Architected a **multi-source Knowledge Router** exposing 2 data sources (**Qdrant**, **LightRAG**) as LLM-routable tools, eliminating the need for a separate intent classifier.
- Integrated **Hermes Agent** with Google Calendar and Lark/Feishu to develop AI-powered tools to automate daily tasks and workflows.
- Built an evaluation pipeline combining **Langfuse** (production tracing) and **deepeval** (Faithfulness, AnswerRelevancy, ConversationalGEval) against a golden dataset synthesized from internal wiki docs.
- Built a **personal knowledge-base chatbot** using LangChain and LangGraph, following Karpathy's Wiki LLM architecture, with Chainlit as the chat interface.

Education

FPT University Da Nang, Vietnam
B.S. in Artificial Intelligence, GPA: 7.9/10 *08/2021 – 09/2025*

- Thesis: AI-based smart cooking assistant for ingredient recognition and recipe recommendation, combining transformer-based computer vision models with a Retrieval-Augmented Generation (RAG) system.

Technical Skills

Programming: Python, Java, R
AI/ML: PyTorch, TensorFlow, Scikit-learn, OpenCV
LLM/Agent: LangChain, LangGraph, MCP, RAG, LightRAG
Backend: FastAPI, REST API, Async Programming
Retrieval/Data: Qdrant, FAISS, NumPy, Pandas, MongoDB, PostgreSQL
Tools/Infrastructure: Git/GitHub, Linux, Docker, AWS, Chainlit

Selected Projects

AI-Based Smart Cooking Assistant *05/2025 – 09/2025*

- Crawled, cleaned, and labeled a dataset of approximately 14,000 food images for ingredient recognition.
- Fine-tuned YOLO for food-ingredient detection.
- Built a RAG-based recipe recommendation system using LangChain.

Image Restoration Using Transformer-GAN *01/2025 – 04/2025*

- Implemented a Transformer-GAN based image restoration pipeline.
- Achieved a 64% improvement in SSIM on the evaluated restoration task.

Student Attendance by Facial Recognition *09/2023 – 03/2024*

- Designed and trained deep learning models for facial-recognition-based attendance.
- Achieved 82% recognition accuracy and compared multiple ML/DL architectures.
