Summary

AI Engineer and Software Engineer with a solid foundation in core computer science and software development. Experienced in building production AI/ML and LLM-based systems as well as backend services, with strong problem-solving skills and a fast-learning, adaptable mindset. Currently seeking a full-time opportunity to keep growing as an AI Engineer / Software Engineer and contribute to real-world, impactful projects.

Work Experience

Dewly 05/2026 – 08/2026
AI Engineer

- Developed and optimized AI/ML models for a production RAG system, improving retrieval accuracy and scalability by designing a fine-grained **RBAC** microservice (**FastAPI**) with chunk-level permission filtering on **Qdrant** payloads for secure multi-tenant access across HR/Finance/Tech agents.
- Integrated multiple AI solutions into an existing enterprise platform (Lark/Feishu) by architecting a **multi-source Knowledge Router** exposing **Qdrant** and **LightRAG** as LLM-routable tools, removing the need for a separate intent classifier and simplifying system integration.
- Collaborated with the engineering team to integrate **Hermes Agent** with Google Calendar and Lark/Feishu APIs, building AI-powered tools that automate daily workflows and troubleshooting recurring issues in production.
- Built and maintained an **MLOps evaluation pipeline** combining **Langfuse** (production tracing/monitoring) and **deepeval** (Faithfulness, AnswerRelevancy, ConversationalGEval) against a golden dataset, and documented model architectures, metrics, and deployment procedures for the team.

FPT Software 05/2024 – 09/2024
Software Engineering (Java Backend)

- Developed and maintained REST APIs for backend microservices using **Java** and **Spring Boot**, following code review and testing practices as part of a collaborative engineering team.
- Designed business logic for assigned APIs, translating requirements into scalable, maintainable microservice components.
- Wrote **Docker** configurations to containerize services, supporting consistent build and deployment across environments.

Education

FPT University 08/2021 – 09/2025
B.S. in Artificial Intelligence, GPA: 7.9/10

- Thesis: AI-based smart cooking assistant for ingredient recognition and recipe recommendation, combining transformer-based computer vision models with a Retrieval-Augmented Generation (RAG) system.

Technical Skills

Programming: Java, Python
Backend & Architecture: Spring Boot, Microservices, API Gateway, FastAPI
Messaging & Resilience: Apache Kafka, Resilience4j
Service Discovery: Netflix Eureka
Database: PostgreSQL, MySQL, MongoDB
DevOps & Tools: Docker, Git, GitHub, Linux
Agent coding: Antigravity, Codex, Claude

Personal Projects

E-Commerce Services — Microservices-based E-commerce Backend *10/2026 – present*

- Designed a backend platform with 7 business microservices, API Gateway, Config Server, and Eureka for identity, catalog, inventory, orders, payments, and notifications.
- Implemented event-driven communication with Kafka, using transactional outbox and idempotency patterns; integrated Elasticsearch for product search.
- The system operates stably with an average response time of approximately 0.8ms.
